#### **DETAILED ACTION**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicants' submission filed on 09/21/2006 regarding application 10/625,631 filed on 07/24/2003 has been entered. Amendment and remarks accompanying applicants' submission have been reviewed. Responses are provided as below. Claims 1 – 13 and Claims 16 – 27 were cancelled. Claim 29 is newly added. Claims 14, 15, 28 and 29 remain pending in the application.

## Claim Objections

2. Claims listed below are objected to because of the following informalities:

Claim 14, line 4, before "placement" delete —the—.

Claim 15, line 4, change "the environment" to —an environment—.

Claim 15, line 4, after "processing" delete —the—.

Claim 15, line 5, before "piece" insert —a—.

Claim 15, line 8, checking the placement" to —checking the series of placement—.

Claim 29, line 2, after "history" insert —information—.

Claim 29, line 2, before "program" insert —placement and wiring processing—.

Claim 29, line 2 – 3, delete —of placement and wiring—.

Claim 29, line 5, checking the placement" to —checking the series of placement—.

Appropriate corrections are required.

# Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/625,631 Page 3

Art Unit: 2825

4. Claims 14, 15, 28 and 29 are rejected under 35 U.S.C. 102(b) as being unpatentable over U.S. Patent No. 5,050,091 to *Rubin*.

- 5. As to Claim 14, *Rubin* shows and discloses the following subject matter:
  - A method of <u>controlling</u> (i.e., <u>processing</u>) connectivity (i.e., wiring) and (polygon) placement of electrical circuits while modifying the design of such circuits [col. 1, line 17 21; col. 2, line 1 21];
  - <u>Computer program</u> (e.g., <u>placement and wiring processing program</u>) for controlling the operation of a sequence of synthesis tools – [col. 6, line 40 – 48];
  - Reading out a <u>placement and wiring processing program</u> from a <u>mass storage unit</u>
     604 (i.e., <u>program storage unit</u>) [Fig. 6];
  - Copying said read out placement and wiring processing program on from the mass storage unit 604 (program storage unit) to main memory 606 (i.e., hard drive or RAM a storage unit) to be retrieved by a central processor 607 of a computer [Fig. 6]; establishing an interactive graphic design system (i.e., standard hardware design environment) by using a graphic editor and display monitor 601 [Fig. 6; col. 1, line 49 col. 2, line 43]; analysis and synthesis tool in an environment of circuit layout [abstract]; Notice that the graphic design system is an industrially well-known standard hardware design environment, which executes a program for operating and processing the placement and wiring to design a layout of a piece of an integrated circuit;
  - Executing <u>placement and wiring processing</u> by a control system 612 based on said placement and wiring processing program stored in the <u>main memory</u> 606 (hard drive or RAM – a <u>storage unit</u>);
  - A programmable logic array (PLA) generator include a <u>program</u> (i.e., an executable placement and wiring program) for use (in placement and routing) in generating programmable logic arrays...the (PLA generator) program provides (<u>functional</u>) <u>commands</u> guide to placement process and a router to layout a programmable logic array for implementing a desired function [col. 8, line 24 32]; Notice that (1) to change a function of PLA, the (functional) commands in the program (for placement and wiring processing) needs to be modified (2) program storage unit (mass storage 604) and storage (main memory 606) are isolated, and they functioning independently (3) <u>to modify an executable (placement and wiring)</u> program, some source codes needed to be modified, and modified source codes

Art Unit: 2825

needed to go through compiling and linking to achieve an executable placement and wiring program being implemented by a placement processor and a router.

Therefore, the modification needed to be performed on the source codes of the program, which is stored in the program storage unit (mass storage 604).

For reference purposes, the explanations given above in response to Claim 14 are called [Reference A] hereinafter.

- 6. As to Claim 15, *Rubin* shows and discloses the following subject matter:
  - A method of <u>controlling</u> (i.e., <u>processing</u>) connectivity (i.e., wiring) and (polygon) placement of electrical circuits while modifying the design of such circuits [col. 1, line 17 21; col. 2, line 1 21];
  - <u>Computer program</u> (e.g., <u>placement and wiring processing program</u>) for controlling the operation of a sequence of synthesis tools [col. 6, line 40 48];
  - Reading out a <u>placement and wiring processing program</u> from a <u>mass storage unit</u>
     604 (i.e., <u>program storage unit</u>) [Fig. 6];
  - Copying said read out placement and wiring processing program on from the <u>mass storage unit</u> 604 (<u>program storage unit</u>) to <u>main memory</u> 606 (i.e., hard drive or RAM a <u>storage unit</u>) to be retrieved by a central processor 607 of a computer [Fig. 6]; establishing an interactive graphic design system (i.e., <u>standard hardware design environment</u>) by using a graphic editor and display monitor 601 [Fig. 6; col. 1, line 49 col. 2, line 43]; analysis and synthesis tool in an environment of circuit layout [abstract]; Notice that the graphic design system is an industrially well-known standard hardware design environment, which executes a program for operating and processing the placement and wiring to design a layout of a piece of an integrated circuit;
  - Storing <u>execution history information</u> associated with every placement and wiring processing executed by a program (i.e., an <u>executable placement and wiring processing program</u>) in a <u>database 615</u> [Fig. 6; col. 4, line 18 20, line 39 41]; database change means 615 for <u>updating database 615</u> [Fig. 6; col. 6, line 26 30]; <u>Notice that (1) execution history information is stored in database 615 (2) updating database is to store new execution history information;
    </u>

Art Unit: 2825

 Design rule checker – Checking placement and wiring processing operated through said placement and wiring processing program based on (execution history) information stored in the database 615 – [Fig. 6; col. 6, line 6, line 29 – 30];

Display system 150 for display <u>error messages</u> (i.e., <u>error information</u>) detected by design rule checker – [col. 11, line 1 – 11; col. 12, line 16 – 18; col. 9, line 25 – 42].

For reference purposes, the explanations given above in response to Claim 15 are called [Reference B] hereinafter.

- 7. As to Claim 28, reasons are included in [Reference A] given above.
- 8. As to Claim 29, reasons are included in [Reference B] given above

### Response to Amendment and Remarks

9. Applicants' amendments and remarks filed on 07/21/2006 have been reviewed. Applicants' arguments have been fully considered but they are not persuasive. Claim 29 is newly added. Detailed responses to Applicants' argument are included in the Office Action given above.

## Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to *Sun James Lin* whose telephone number is (571) 272 - 1899. The examiner can normally be reached on Monday-Friday 9:30AM - 6:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, *Jack Chiang* can be reached on (571) 272 - 7483. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2825

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Page 6

All responses to this Office Action should be mailed to *Commissioner for Patents*, *P.O. Box 1450, Alexandria, VA 22313-1450* or faxed to *571-273-8300*.
